

KB Technologies SL Auditor

Suddenly finding you are wracked by new **regulations** and **compliance issues?**

The Sarbanes-Oxley Act of 2002 has wide reaching impact. Part of this impact is the requirement for increased controls over financial accounting and reporting. Typical security measures are no longer enough to assure the integrity of your accounting system and data.

SL Auditor can help.

SL Auditor was designed with the Sarbanes-Oxley Act in mind. The intuitive interface allows the user to easily configure the utility to meet specific needs, as the user selects which **tables** and **processes** to audit. For every add, change or delete the utility:

- Tracks what was changed, displaying both “before” and “after” values.
- The date and time of the change.
- The program from which the change was made.
- The Dynamics SL user id of the person who made the change.
- The computer name of the origin of the change.
- The SQL Server User ID.

SL Auditor operates at the data level and is completely invisible to the end user. It is also useful for other Dynamics SL environments where increased control is required.

New maintenance screen makes upgrades even easier. New setup history function “audits the auditor” by recording changes made to the SL Auditor Setup screen. “Advanced Search” and “Field Search” functions make it easy to drill deeply into audit data.

Each copy includes free technical support and free upgrades, as they become available, for as long as we support the product. Never any recurring support fees.

Product Overview

Track additions, deletions, and changes to virtually any data element in Dynamics SL.

Reports “before” and “after” values, date/time, program used, SL user ID, SQL user ID, and computer name. Even captures changes made by external programs!

Tracks process executions, too.

Includes tables and processes for most Dynamics SL modules. Add additional modules at no charge. Supports custom and 3rd -party modules and tables.

**Compliance. Accountability.
Peace of Mind.**

Easy to install and configure.

KB Technologies SL Auditor

Your Needs, Now.

Easy to use and configure, SL Auditor allows the user to pick and chose which tables and processes they wish to audit. Even custom tables are not immune to your scrutiny.

Designed to help companies using Dynamics SL to comply with certain provisions of Sarbanes-Oxley by tracking changes to Dynamics SL data without users ever knowing it is there.

Peace of Mind.

Search SL Auditor records by module, table/process, date range, User ID, and/or Transaction Type. With Advanced Search, narrow your selection with specific field values. View changes sorted for a specific field. See the before and after. The results provide a wealth of information, and the changes in field values are highlighted in color for easy identification. Two reports are also included, and users can add up to six custom Crystal Reports.
