

Migration Manager for Acumatica

Migration Manager for Acumatica is a multi-purpose integration, migration, and data conversion solution that:

- Reduces the time, cost, and complexity of migrating financial data to Acumatica
- Enables Acumatica to be implemented as a corporate consolidations and reporting platform
- Enables integrations with systems such as payroll processing where detailed information needs to be accessible but not exposed in Acumatica's native General Ledger detail
- Automates monthly data imports
- Accesses secure FTP (SFTP) sites

The screenshot displays the Acumatica Account Mapping interface. The browser address bar shows the URL: localhost/Consolidations/?CompanyID=Company&ScreenId=NVGL2010. The application header includes the Acumatica logo and navigation tabs: ORGANIZATION, FINANCE, CONFIGURATION, SYSTEM, HELP, and GL IMPORT. The date and time are 1/18/2016 9:45 PM, and the user is ADMIN@COMPANY. The main window title is 'Management' and the current view is 'CSI - Account Mapping'. A search bar is present with the text 'Type your query here'. The table below lists account mappings with columns for Overrid, Source Account, Acumatica Account, Subaccount, Post Option, Acumatica Seg01, and Acumatica Seg02. A context menu is open over the table, showing options: Generate Map, Create Accounts, and Create Subaccounts.

Overrid	Source Account	Acumatica Account	Subaccount	Post Option	Acumatica Seg01	Acumatica Seg02

MIGRATION AND CONSOLIDATION

Migration Manager will help your organization make a smooth transition from Microsoft Dynamics, Sage, QuickBooks, or any other ERP to Acumatica. Migration Manager will save you time and reduce the cost and complexity of mapping and converting to your new Acumatica structure.

Migration Manager eliminates the manual and complex process of loading data into spreadsheets, sorting, executing look ups, and creating import scenarios. Then, within Acumatica it provides a more structured fashion in which you can create mapping from a legacy account structure to Acumatica accounts, segments, and branches, reducing errors and frustration.

Using Migration Manager, you can map, re-map, validate, and edit your data. Migration Manager can also dynamically create or add new accounts, subaccounts, and segments to Acumatica based on your source data. Mapping errors are common on the first try and without Migration Manager, the correction process is tedious and time consuming. But Migration Manager enables you to make adjustments to fix the mapping and reload the data with just a few clicks.

Migrating many years of historical details can be time consuming and impact ongoing performance. Migration Manager can selectively store all history in accessible staging tables and post to the active general ledger in summary or detail. See just what you need in the General Ledger and retain the detail in the staging tables.

Migration Manager enables mapping from a single database or multiple sources to a single Acumatica company with multiple entities.

Migration Manager is easy to use and provides a full audit trail.

BENEFITS:

- Map old accounts, sub-accounts, and company ids to new ones using the crosswalk function.
- Automatically figure out the correct fiscal period.
- Consolidate multiple companies, even if one is in Microsoft Dynamics SL, one is in QuickBooks, and one is in Sage.
- Integrate ERP data with data from other systems like payroll or commissions.
- Edit source files directly.
- Identify problems using the error log and make on-the-spot corrections.
- Import from Microsoft Excel or avoid the Excel maximum of 64,000 lines by importing from a single text file.
- Configure options as a template that you can use again and again.
- Post to Acumatica in summary or detail by account and never lose the history.
- Upload from a secure ftp site (functionality not supported by native Acumatica).
- Enable Acumatica General Ledger to handle hundreds of thousands of transactions on an upload.
